

— AMERICAN EXPRESS · CODESTREET 2026 —

The **trust layer** for autonomous finance.

One place to govern every autonomous decision — before it can move money.

● ALLOW

● ESCALATE

● DENY

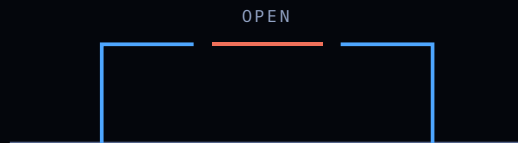

— THE SHIFT

AI stopped advising. It started **acting.**

Refunds. Limit changes. Payments — now taken by
software, at machine speed.

— WHAT THAT REMOVED

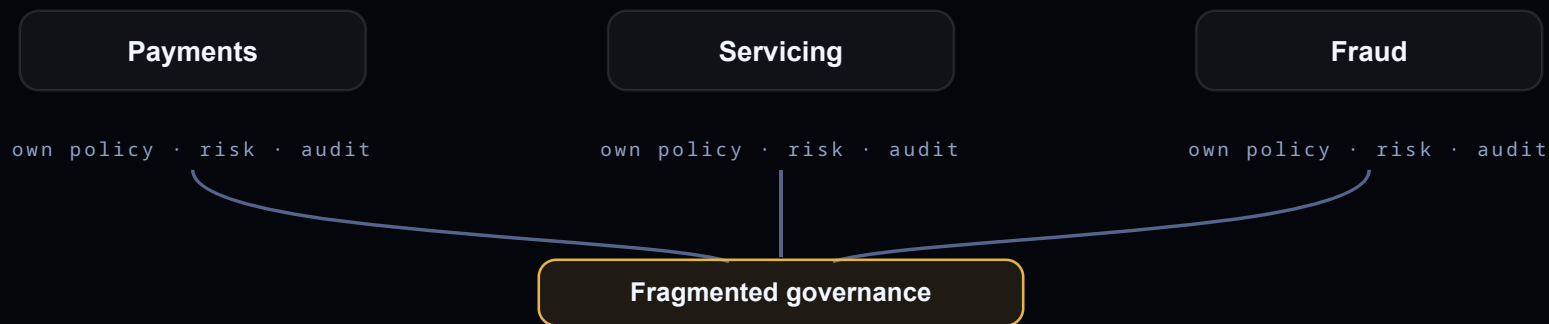

The human checkpoint is gone.

Agents move money with no one watching the decision.

— THE ENTERPRISE REALITY

Governance is built per agent — not per enterprise.

Manageable at three agents. Unmanageable at three hundred.

— THE QUESTION NO ONE CAN ANSWER

**“Which agents can
move money right
now?”**

TODAY, THE HONEST ANSWER IS — NOBODY
KNOWS.

— THE VISION

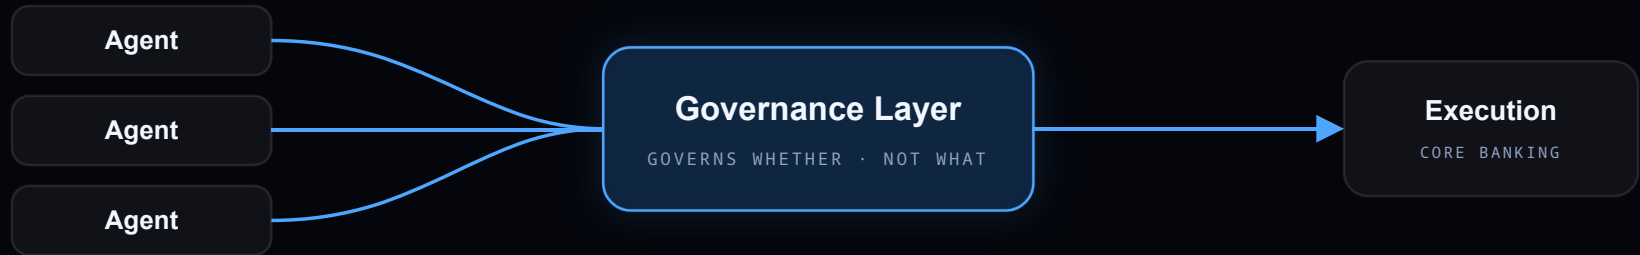

Autonomous finance, trusted by default.

Any team can deploy an agent that acts — and every decision is already governed, explainable, and accountable.

— THE SOLUTION

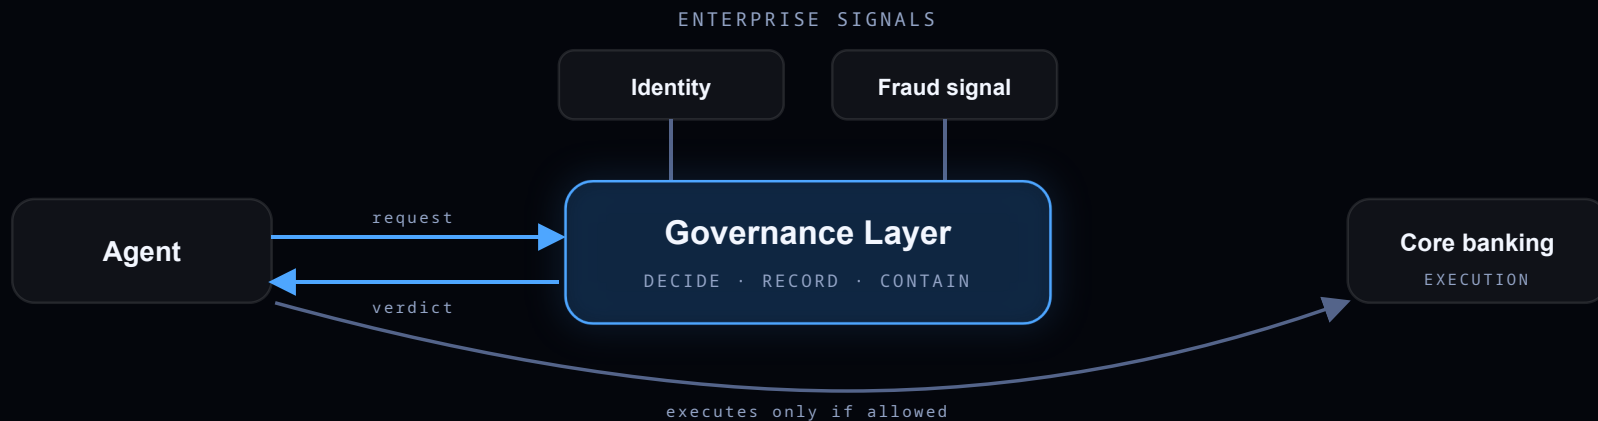

One governed front door for **every** decision.

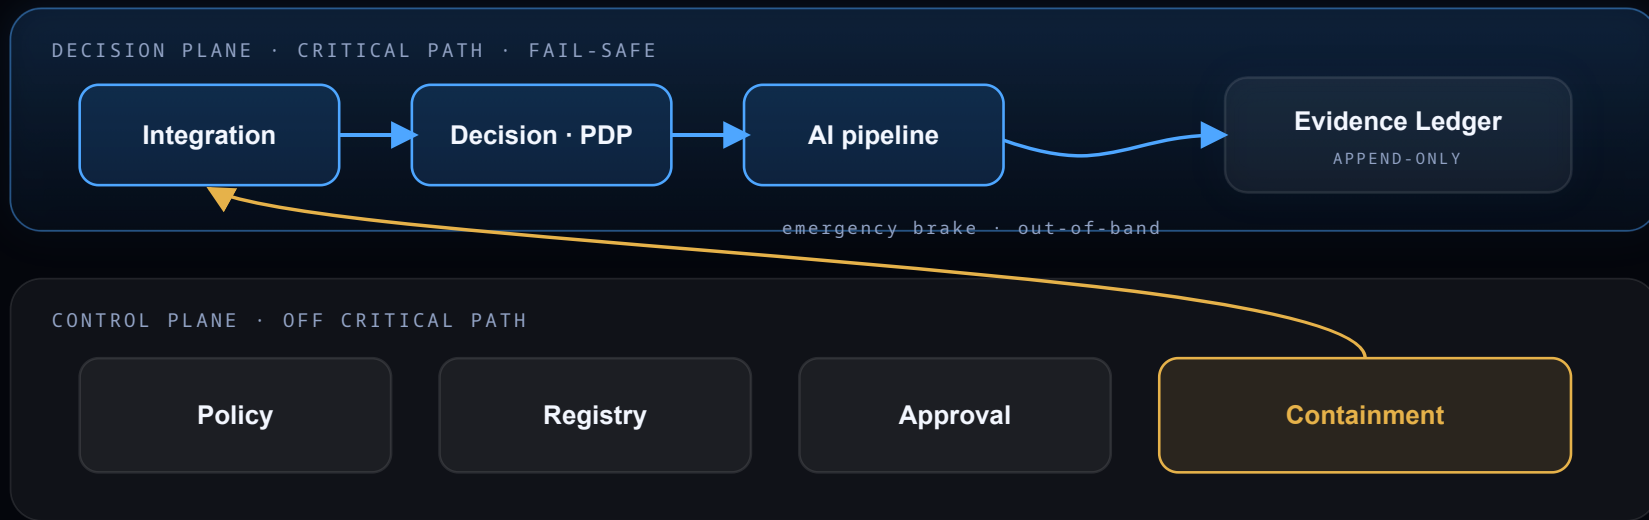

Governance externalized into one reusable capability —
never rebuilt inside every agent.

— WHERE IT SITS

In the **decision** path — never the money path.

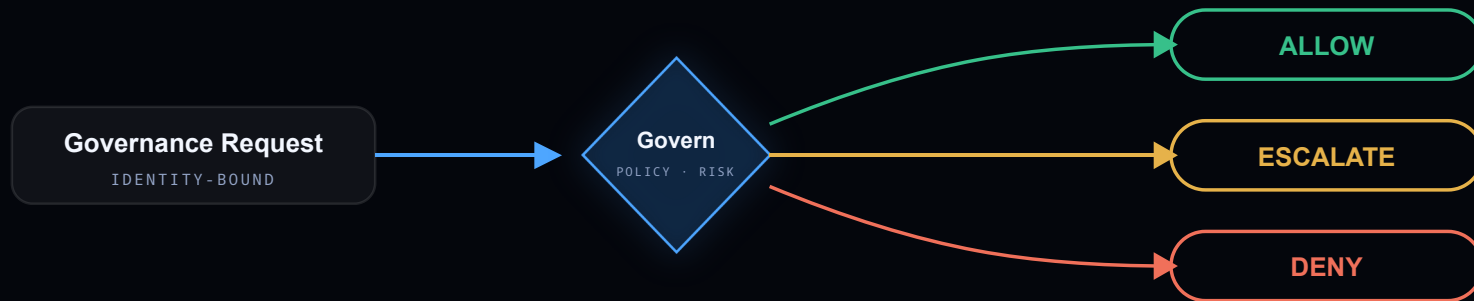

Two planes: fast & fail-safe, beside rich & tolerant.

— THE GOVERNANCE FLOW

Every action
→ one verdict.

High-risk blocks inline, fail-closed. Low-risk is governed asynchronously.

— THE AI, MADE SAFE

The model informs. It never decides.

model-backed — behind a Strategy interface, never holds authority

Every outcome carries a human-readable reason — for
allow, deny and escalate alike.

— CAN IT BE SUBVERTED?

Defense in depth.

Six independent layers bound the blast radius — no single control has to be perfect.

Edge identity

Runtime authorization

Versioned policy

Fail-safe decisioning

Tamper-evident evidence

Out-of-band containment

— WHAT HAPPENS WHEN THINGS BREAK?

When in doubt, it **says no.**

Lose a signal, a dependency, or confidence — high-risk
fails closed. Throughput yields before safety does.

— CAN YOU PROVE IT?

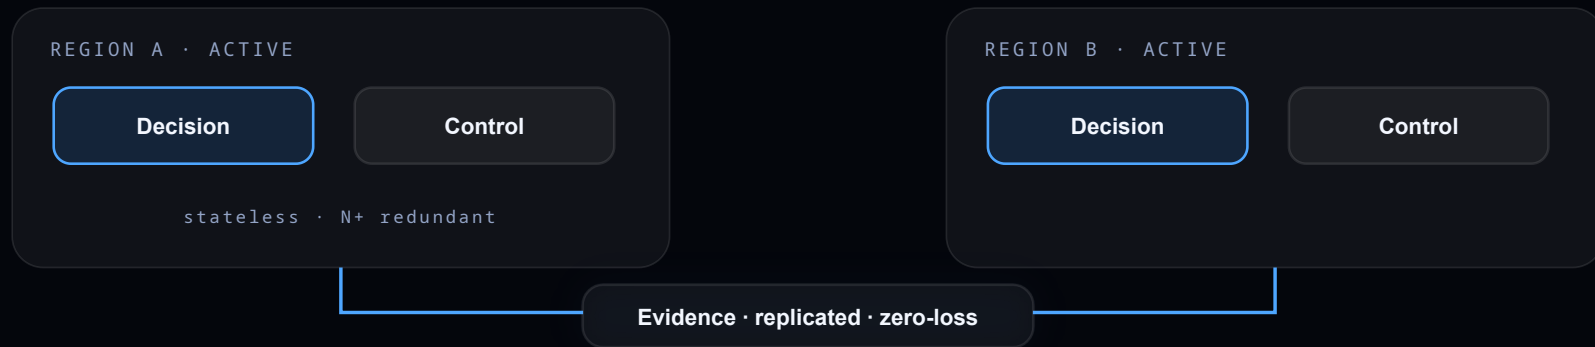

Every decision, provable forever.

Append-only, tamper-evident, reconstructable on demand
— minutes, not weeks.

— DOES IT SCALE?

Stateless where it's
fast — replicated
where it's **true**.

— WHY THIS IS THE RIGHT DESIGN

Four decisions do the heavy lifting.

01

External by design

Governance lives outside the agent
— so it can't be re-fragmented.

02

Hybrid enforcement

Inline for high-risk; async for the rest.
Proportionate.

03

Fail-closed

Uncertainty resolves to deny or
escalate. Never fail-open.

04

Evidence by construction

Event-sourced, immutable —
reproducibility is structural.

— WHERE IT GOES

One model. Growing reach.

Third-party agents

The same front door — with a tightened trust boundary.

Predictive governance

Anticipate risk from the evidence stream — advisory, never authority.

All enterprise AI

Governance as shared infrastructure, beyond finance.

Capabilities expand. The principles never move.

— THE IDEA, IN ONE LINE

Not governing AI. Governing autonomous financial decisions.

Every decision — whichever agent makes it — through a
single trusted place, before it can take effect.

● ALLOW

● ESCALATE

● DENY
